ProgeCAD Viewer DWG [Win/Mac]

The DGN Hyperlinks for XREF and Object-XREF must be in the DGN File in order to take advantage of the powerful hyperlink functionality. Our DGN Hyperlinks for XREF contain additional information that is not available elsewhere. For example, your DGN file contains a layer that is partitioned by an object. In another layer you have a part number. All is OK if the objects in that layer are "hyperlinked" to the part number layer. However, if the objects are not hyperlinked, it will not work. It will not be able to perform a Go To operation on a part number because it will not know where to navigate. You can create custom XREF based on your DGN file by creating a custom DGN XREF. The UUID (unique identifier) value that gets generated from the main DGN file is a long string. You can use this value as the UUID of your custom XREF.
